2010-2011 WHS School Improvement Plan

Promoting Participation in School Governance: School Council will strengthen and improve communication among constituencies, to ensure that all groups are working effectively with each other. We will keep the greater school community informed about current work and opportunities to participate in school governance. We want to ensure that all are given the information to formulate ideas and influence pending decisions.

Promoting a Balanced and Equitable WHS Experience: School Council, in conjunction with the Culture and Climate Committee, will promote a balance of academic, extracurricular, and social activities for all members of the WHS community. We will support recommendations for building resiliency and managing sources of stress, as well as introduce means to further psychological wellness in all members of the school community. In addition, School Council will support initiatives to address issues of academic equity and achievement.

Building and Respecting Community: In an effort to make the school more welcoming, School Council will support programs and initiatives that raise awareness about attitudes and behaviors that threaten, offend, or marginalize any member of the school community and foster an atmosphere respectful of all voices, cultures, and identities.

Responding to Changes in the Physical Environment: School Council will anticipate, recognize, and respond to challenges that arise due to increasing enrollment, an aging facility, and the construction project in association with the Building Impact Advisory Committee. School Council will promote responsible environmental stewardship to support and extend the efforts of the Green Team.

Assessment at Wellesley High School: School Council will support a school-wide effort to focus on assessments. Emphasis will be placed on professional development, consistency of protocols, communication of expectations, and data-driven decision making.
