**The Living Lawn,  
A Lawn for Living:  
Simple Steps to  
Organic Lawn Care<sup>©</sup>**

Professional horticulturist Charles E. (Chip) Osborne will discuss the compelling reasons for considering a natural approach to lawn care. Public health, children's health, storm-water runoff, and water quality are all reasons why we should reduce our dependence on synthetic and chemical products to grow our lawns and gardens. The presentation will also address what we can do at the municipal level to maintain our public spaces in ways that reduce our use of synthetic products that have negative impacts on human health and the environment. Refreshments will be offered.
