| ⑤ | Water Supply Property
Well head protection zone 1 conflict | REJECTED |

PHASE I STUDY LOCATION

TOWN OF WELLESLEY PICKLEBALL COURT STUDY

MORSES POND

LOCATION 1 | FEASIBLE

location 1 has been identified as the best location for proposed pickleball courts for the following reasons,

- distance from the beach
- general flat nature of the existing topography
- minimal tree clearing
- access to parking and adjacent sidewalks

LOCATION 2 & 3 | NOT FEASIBLE

location 2 and 3 have been removed as a possible location for pickleball courts because of the environmental impacts including tree removal, grading, low existing recreational activity in the area and lack of parking.

EXISTING SITE PHOTOS

PHASE II

TREE MANAGEMENT

Vegetation Removals:

approximately 10,570 square feet (0.26 acres) of existing vegetated area will be demoed to accommodate the space for the pickleball courts. W&S is working with the town to provide a comprehensive list of existing vegetation within the court limits.

Landscape Improvements:

Although vegetation will be removed as part of the court project, the addition of a 1,630 sf bioretention area and improvements to the surrounding landscaping including the planting of 11 trees, minimum, and establishment of a low mow seed mix in an area approximately 8,200 sf will supplement the habitat value lost from the existing vegetation removal areas.

VEGETATION MANAGEMENT | OPTION 1

LEGEND

-  TREE REMOVAL AREA
-  PROPOSED TREES (11 not including the parking lot islands)
-  BIORETENTION AREA (1,630 sf)
-  EXISTING TREES TO REMAIN

PHASE II

VEGETATION MANAGEMENT | OPTION 2

TREE MANAGEMENT

Vegetation Removals:

approximately 3,300 square feet (0.07 acres) of existing vegetated area and 5,770 square feet of gravel lot will be demoed to accommodate the space for the pickleball courts. W&S is working with the town to provide a comprehensive list of existing vegetation within the court limits.

Landscape Improvements:

Although vegetation will be removed as part of the court project, the addition of a 1,630 sf bioretention area and improvements to the surrounding landscaping including the planting of 11 trees, minimum, and establishment of a low mow seed mix in an area approximately 8,200 sf will supplement the habitat value lost from the existing vegetation removal areas.

LEGEND

-  MINIMAL VEGETATION REMOVAL
-  PROPOSED TREES (11 not including the parking lot islands)
-  BIORETENTION AREA (1,630 sf)
-  EXISTING TREES TO REMAIN

PHASE II

STORMWATER CALCS

The stormwater retention area (indicated as “Bioretention Area”) is designed with a basin volume equal to 1-inch of rainfall over the impervious areas of the project limits. The basin volume is defined as the volume below the lowest outlet structure rim elevation. The minimum required volume is calculated as follows:

New courts=8,500 SQ. FT.
 1-inch X 8,500 SQ. FT. = 709 CU. FT. minimum required volume

The proposed volume provided in the rain garden below the lowest outlet structure is 1,830 CU.FT. (at elevation 129.50) Which is over **2.5 times greater than the minimum required volume.**

Given that the proposed court locations are outside of Zone I and the court is discharging into a bioretention area outside Zone I, the proposed conceptual design meets the water quality restrictions set in place. Additional coordination shall occur with the Wellesley Water Department, Mass DEP, and NRC in any future phases.

STORMWATER IMPROVEMENTS

STORMWATER APPROACH

Highlight:

Stormwater infiltration

The stormwater from pickleball court and the pond parking lot will be absorbed and filtered naturally in the bioretention area, which ensures that stormwater is captured and naturally filtered before discharges.

Supporting biodiversity

The use of native plants in the bioretention area can attract birds, amphibians and insects from the surrounding biodiversity rich areas. This could support local biodiversity and provides aesthetic value.

PHASE II

ENVIRONMENTAL & SITE CONSIDERATIONS

SOUND STUDY

The pickleball noise propagation is determined by four factors:
Distance, Relative Topography, Number of Courts, and Lights/Night Playing.

Per the acoustics study done in Phase I, 4 courts would require a 15' height sound barrier

Existing Sound Barriers

Morses Pond parking lot is surrounded by trees and shrubs which act as **natural sound barriers** by absorbing and deflecting sound. The Morses Pond Water Supply Building also serves as a **substantial physical barrier** that blocks noise pollution. Additionally, the ex. MBTA tracks and Central Street activity mitigate the sound travel to the south of the site.

These natural and structural elements can buffer sounds from permeating into the communities, enhancing overall noise mitigation efforts. **It should be noted that the existing natural and structural barriers do not cancel out the need for a 15' height sound barrier.**

TOWN OF WELLESLEY PICKLEBALL COURT STUDY

PHASE II

ENVIRONMENTAL & SITE CONSIDERATIONS

SOUND STUDY

Option 2 is situated approx. 950' away from the main public beach and between 760' and 800' away from the closest residential properties.

Sound Barrier:

Given the adequate distances, and natural and physical barriers, A **15-foot height barrier** is recommended to adequately mitigate any potential noise from reaching surrounding properties and amenities.

TOWN OF WELLESLEY PICKLEBALL COURT STUDY

	Bituminous Courts	Post Tension Concrete Courts
ITEM	COST	COST
Site Preparation/Demolition - includes tree clearing & grubbing, grinding stumps and disposals, E&S controls, construction fencing, construction entrance	\$37,000	\$37,000
Earthwork - includes excavation, hauling, fine grading & compaction (Bit - 18" depth, PT Concrete = 13" depth)	\$19,000	\$15,000
Stormwater Drainage - includes stormwater requirements for the 100-year storm	\$125,000	\$125,000
Site Improvements - includes loam and seed of disturbed area	\$9,000	\$9,000
4 Courts - includes (Bit or PT Concrete)tennis court cross section, nets, posts, tiedowns, line striping, and color sealcoat.	\$98,000	\$159,000
Fencing - includes 15' high perimeter fencing, single and double gates, 15' ht - sound barrier	\$110,000	\$110,000
Subtotal:	\$398,000	\$455,000
Mobilization, Overhead & Profit 15%	\$60,000	\$68,000
Contingency 25%	\$100,000	\$114,000
Construction Subtotal:	\$558,000	\$637,000
Soft Costs: (design services, permitting, construction documents, bid assistance)	\$65,000-\$70,000	\$76,000-\$80,000

Opinion of Probable Cost Disclaimer:

1. Estimated totals includes contractor mobilization, overhead & profit (15%), contingency (25%)
2. For planning purposes only. Pricing is in no way a guarantee.
3. Assumes no hazardous material and no rock removal.
4. Prices may vary significantly due to recent volatility of inflation and escalation of construction prices

Post Tension Concrete:

Post-tension concrete (PTC) courts are built using a specialized technique that reinforces the concrete slab with high-strength steel cables or tendons.

Pros:

1. **Durability:** PTC courts have increased resistance to settling, heaving, cracking, and extreme weather conditions. They can last 25+ years with proper maintenance.
2. **Reduced Maintenance:** Due to their durability and crack resistance, PTC courts require less maintenance over their lifetime. They also have superior drainage, allowing play immediately after rain.
3. **Improved Performance:** PTC courts have less deflection, vibration, and cracking compared to traditional concrete, providing a consistent, high-quality playing surface.
4. **Quality Assurance:** Post-tensioning plants and installers must be certified by the Post-Tensioning Institute, ensuring a high level of quality for the court.

Cons:

1. **Upfront Costs:** PTC courts are more expensive upfront due to the materials and skill level required for installation.
2. **Repairs:** Although rare, repairs or modifications to PTC can be challenging and risky due to the design of the tendons.

CONCLUSIONS

Based on the feedback we received through public survey and town-wide inventory, it is recommended that 4 dedicated pickleball courts be located at Moses Pond to alleviate the growing demand and needs of the community. The addition of these 4 court will provide,

- up to approximately 4800 daylight hours (sunrise to dusk) of available play annually per court (does not account for weather)*
- reduce the use of pickleball play on shared tennis/pickleball courts in town
- provide the users a dedicated multicourt facility away from neighboring residential properties

Moses Pond location 1 has been identified as the only location because of the distance to neighboring residential properties, access to existing parking, and minimal impacts to existing conditions.

Key Factors

- Location 1 remains outside of any key environmental regulation zones and utilizes existing flat topography with minimal earthwork required.
- The proposed location of the pickleball courts should not displace existing available parking. Further exploration of defining the existing lot would benefit the overall parking capacity.
 - The courts have a capacity of +/-16 players at any given time, resulting in the loss of equal spaces from the existing lot during peak hours of play, leaving up to 94 potential spaces in option 1 and 124 potential spaces in option 2 for beach goers.
- According to the acoustics study done in Phase I, 15' height barriers would be recommended for the location (for 4 courts).
- A large bioretention area is recommended to offset the impacts on stormwater. The benefits from the bioretention area provide stormwater retention and filtration, as well as supports native biodiversity.

Additional Considerations

Space is available to split the four courts into (2) 2 court areas to include a waiting area with seating and a shade canopy between. This would provide a space for players on deck as well as provide additional sound mitigation by deflecting sound vertically.

SH Acoustics: Pickleball Noise Guidelines

Town of Wellesley, MA

Pickleball Noise Guidelines

February 19, 2024

SH Acoustics, LLC
263 Tresser Blvd, 9th Floor, Stamford, CT 06901-3236
T: (203) 877-6340 W: www.shacoustics.com

Introduction

Weston & Sampson have engaged the expertise of SH Acoustics (SHA) to develop comprehensive noise guidelines tailored specifically for the selection and placement of public pickleball courts in Wellesley, MA. The primary objective of these guidelines is to effectively mitigate the noise generated by pickleball play, ensuring that it falls within an acceptable range that minimizes disturbance to nearby residents and surrounding areas. Through careful consideration of the specific nature of pickleball noise, mitigation strategies, and the multiple contributing factors to outdoor noise propagation, SHA has created a point system that can identify the noise mitigation necessary for a given plot near residential spaces to maintain the tranquility and well-being of local residents.

Pickleball is the fastest growing sport in the United States and throughout this growth, many issues with the sound of the sport have arisen across the country. Many pickleball court installations are situated too close to residential properties and/or without the appropriate noise mitigation. However, it's essential to recognize that pickleball noise is a manageable issue with the implementation of proper noise mitigation strategies. By utilizing techniques such as strategically placed fencing, and designated playing hours, communities can effectively control and minimize the impact of pickleball noise. Unlike tennis, pickleball has a distinct "plunk" noise due to the hard plastic ball against a hard paddle. We have measured this frequency to be around 1 kHz. Fortunately, this relatively small wavelength can be easily controlled with the appropriate noise mitigation.

Noise codes frequently fail to account for pickleball gameplay's unique sound profile and frequency. The repetitive thwack of paddles hitting balls and the reverberations off hard court surfaces can be particularly disruptive in residential areas. However, these nuances are seldom captured in traditional noise ordinances. Consequently, residents near pickleball courts may experience heightened frustration due to the lack of specific guidelines tailored to mitigate the annoyance factor of pickleball noise. Addressing this gap in noise regulation requires a nuanced approach that considers the distinctive characteristics of pickleball sound and its impact on community well-being, prompting noise guidelines specific to the sport.

Contributing Factors to Pickleball Noise Propagation:

The main factors that play into how disruptive a sound will be is Factors at play are:

Distance: naturally, the further a residential property is to a court or set of courts, the weaker the sound waves will be as they propagate in all directions.

Relative Topography: The elevation of the court(s) vs. the elevation of the

Number of Courts: A larger number of courts will increase the number and frequency of pickleball hits and the number of players.

Night Play: If the courts are to have lights installed and play can be expected into later hours of the day and into the night, additional mitigation will be required. This is due to a variety of factors, including quieter background noise levels and the tendency for sound to bend back down to the earth after the sun sets due to temperature inversions.

Noise Reducing Paddles:

While our system below acknowledges the potential variance in equipment choices among players, promoting the adoption of noise-reducing paddles can significantly contribute to minimizing overall noise levels on the court. These paddles offer a practical solution by dampening the sound produced during gameplay, thereby lessening the potential for disturbance to nearby residents. While it is understood that not all players may opt to use these specialized paddles, promoting their adoption can help cultivate a culture of mindfulness and respect for the surrounding community.

Proposed Guidelines

To determine if a piece of land is appropriate for pickleball courts, the factors of distance, relative topography, number of courts and nighttime play should all be considered. Use Table 1 below to calculate the points for the specific plot of land to determine how tall of an acoustic barrier, if any, would be required. Determine the number of points for each contributing factor by using the formulas provided or the tables on the following pages. Once the total number of

points is summed, use Table 2 to determine if and how tall a barrier is necessary, or if the studied location is not acceptable for pickleball.

Table 1:

Factor:	Description:	Points Formula (refer to tables on the following pages for each factor)	Points:
Distance (in feet)	D = Shortest distance between the edge of the court to the nearest property line, in feet	$\text{Distance Points} = 55 - \left 10 \cdot \log \left(\frac{2}{4\pi \cdot (D \times 0.305)^2} \right) \right $ (see Table 3 for a conversion chart)	
Relative Topography	Ep = Elevation of the nearest point along the property line, in feet Ec = Elevation of the proposed courts' playing level, in feet	$\text{Topo Points} = (E_p - E_c) \times 0.2$ (see Table 4 for a conversion chart)	
Number of courts	N = number of courts	$\text{Courts Points} = 13 \cdot \log(N)$ (see Table 5 for a conversion chart)	
Lights/Night Playing	If lights are to be installed/night playing will be allowed, add 5 points. If not, add 0.	$\text{Night Points} = 5$	
Sum of Points from all factors:			

Table 2:

Number of Points	Height of Barrier Required
0 or less	No barrier required
0 - 6 points	6' barrier
7 - 8 points	8' barrier
9 - 10 points	10' barrier
11 - 13 points	12' barrier
14 - 16 points	15' barrier
17 or more points	Courts should not be constructed in this location.

Distance Factor:

Where “D” is the shortest distance between the edge of the court surface to the nearest property line, measured in feet.

14	15		29	19
15	15		30	19

Table 5 – Number of Courts Factor Points Chart

Barrier Requirements:

The barrier must consist of a material designed specifically for noise mitigation with a minimum weight of 1 lb. per square foot. The barrier material must extend completely to the court surface and be installed without any gaps. The height of any retaining walls along the edges of the courts should count toward the height of the barriers.

The barrier must be installed on a minimum of three of the four sides of the courts, with the open side facing away from the nearest property line. The calculation must be repeated for the nearest point along the property line exposed to the open side, reaching 0 points or less.

Exceptions:

The point system above is a simplified version of a potentially complex calculation. The point system is always conservative in favor of the residential neighbors. In some cases, additional natural or existing noise mitigation may exist such as extreme topography, large buildings, and densely wooded areas may sufficiently attenuate pickleball noise.

In these cases, if a qualified professional in the field of acoustics is consulted and they determine and document that the existing conditions provide equal or additional noise attenuation, the rules can then be reduced.

Conclusion

We are confident that the system we have developed above will enable pickleball to be played without causing disturbance to the surrounding community. We look forward to continuing our collaboration with you to address any questions or concerns you may have regarding our acoustic study. Please feel free to reach out for further clarification or assistance with any aspect of this matter. Your input is highly valued as we strive to ensure that our pickleball facilities contribute positively to the overall well-being of Wellesley.

Kind regards,

Kevin Peterson,
Technical Director & Senior Consultant
SH Acoustics

Name: Morses Pond Access Rd June 2024

Date/Time: 6/17/2024 8:58 AM

Site Code: Morses Poind Access

Station ID: 0

Location 1: Morses Pond Access

Location 2:

Location 3:

Location 4:

Latitude: 0.000000

Longitude: 0.000000

Channels: , Channel 1 - Direction X, Lane 1, Channel 2 - Direction X, Lane 2

Filters Applied: None

APPENDIX D

Noise Barrier Considerations & Precedent Facilities

NOISE BARRIER CONSIDERATIONS

Barrier Requirements:

- Must consist of a material designed specifically for noise mitigation with a minimum weight of 1 lb. per square foot.
- The barrier material must extend completely to the court surface and be installed without any gaps.
- The height of any retaining walls along the edges of the courts should count toward the height of the barriers.
- The barrier must be installed on a minimum of three of the four sides of the courts, with the open side facing away from the nearest property line.

Recommended Barriers:

- Pickleblok / AcoustiFence Noise Reducing Fences
As manufactured by Acoustiblok, Inc. or similar.
- Retaining walls / Existing Buildings

Additional Noise mitigation:

- *Quiet Paddles or Green Paddles*

(These were not accounted for under site selection parameters.)

(Owl Paddles, first paddle qualifying for USA Pickleballs new Quiet Category)

What is a green pickleball paddle?

A "green pickleball paddle" refers to a pickleball paddle that is meant to produce less noise than traditional pickleball paddles.

The term "green" here is used to indicate that the paddles are more environmentally friendly because they produce less noise pollution.
